// note="Vector: pBluescript pSK; Site_1: EcoRI; Site_2:
Xho1; wh. truncatula sterilised seeds were germinated for
72h at 25 C, Defore transplanting into a 1/3 Epoisses soil
1: 2/3 calcined Terragreen mix in the presence of onion
root fragments colonized by the arbuecular mycorrhizal
fungus Glomus intraradices (Schenck & Smith, isolate
LPA8). The plants were watered every day and twice a week
with a modified nutrient Long Ashton solution without
phosphate but with a high level of nitrate. After 3 weeks
RNA was extracted from whole root systems. CDNA was
prepared from polyA+ enriched RNA. The CDNA was
directionally ligated into Uni-zap XR vector from
Stratagene and packaged using Gigapack Gold packaging
extracts. Plasmids containing cDNA inserts were
mass-excised from phage stocks using ExAssit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France). Note: EST may be of
fungal origin."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TRED9274 GUTA 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell: Oxford University Press, 1999).
